## The polls got it all wrong in 2016. Heading into the midterms, what is the state of polling?

Residents of Boyle Heights vote in the primary election on Tuesday, June 5, 2018.

AirTalk® | September 11, 2018

We all know how wrong most political polls got the 2016 election. That trend seems to be continuing with the 2018 races.

# Part 1: Who was polled?

## SurveyUSA Methodology

Decision 2018 poll conducted by SurveyUSA for Spectrum News Networks. SurveyUSA interviewed **2,800 adults** in Florida online from Aug. 10, 2018 until Aug. 13, 2018. Of those, **2,322 were registered to vote** in Florida. Of those, **558 were likely to vote** in the Aug. 28 **Republican** primary. The Credibility Interval for this poll is +/- 5.2 percentage points.

## Funnel

# Part 1: Who was polled?

## FAU Methodology

This survey was conducted August 16-20, 2018 using an online sample supplied by Survey Sampling International (n=400) and via an automated telephone platform (IVR) using registered voter landline phone lists supplied by Aristotle, Inc. (n=400) for a total sample size of **n=800** **registered voters** who said they are **likely to vote**, with a margin of error of +/- 3.4 percentage points. . It is important to remember that subsets carry have higher margins of error, as the sample size is reduced. The MOE for the Democratic Primary, Likely Voters, n=239, +/- 6.3 percentage points; **Republican Primary, Likely Voters, n=222**, +/- 6.5 percentage points. The data was weighted by ethnicity, region, party affiliation and gender.

## Funnel

n=2,322

Registered Voters

n=558

Registered voters who said they were "likely to vote"

## Part 2: How were they polled?

### FAU Methodology

This survey was conducted August 16-20, 2018 using an **online sample** supplied by Survey Sampling International (n=400) and via an automated telephone platform **(IVR)** using registered voter **landline phone lists** supplied by Aristotle, Inc. (n=400) for a total sample size of n=800 registered voters who said they are likely to vote, with a margin of error of +/- 3.4 percentage points. . It is important to remember that subsets carry have higher margins of error, as the sample size is reduced. The MOE for the Democratic Primary, Likely Voters, n=239, +/- 6.3 percentage points; Republican Primary, Likely Voters, n=222, +/- 6.5 percentage points. The data was weighted by ethnicity, region, party affiliation and gender.

### Funnel

n=800

Registered voters who said they were “likely to vote”

n=222

Republican primary voters who said they were “likely to vote”

And one other thing...

# 2018 Democratic Primary Election

And one other, other thing...

# A Word About the Margin of Error

- ① Presumes randomness and representativeness
- ② Driven by the “n”
- ③ Subgroups increase the MOE
- ④ Weighting increases the MOE

Sorry, but one more  
other thing...

Is it an outlier?

# Key Takeaways

①

Consider the pollster

②

Consider the motivation of the payee

③

Make sure only eligible voters were polled

④

Make sure sample looks like population

⑤

Be wary of outliers
